How do I know if my observation has been uploaded successfully?

There are several ways you can tell if your observation(s) have been uploaded successfully. First, you will receive a message on your screen that the record has been successfully entered and the upload is complete. It is always good to take note of the number of records you are attempting to upload. If this number does not match the number in the app dialog box (shown below), it is possible that some of your observations did not upload properly.

Another clue that your observation(s) have been uploaded, is that your yellow cards will disappear from the screen. If you have red cards listed on your screen, this means that there is an error within the observation record. You must reopen the record and fix the error before it can be uploaded into the iMapInvasives database.
As always, you can login to the online database and look at your observations to see if the new records are there. To login to iMapInvasives online, please navigate to: https://login.imapinvasives.org/nyimi/login/?next=nyimi/
